

Biology

Genetics and Heredity Project

Project Summary:

Create a genetic family history for yourself.

Scope:

The genetic family history is to go back at least four generations. Include both sides of your family. Also include specific genetic traits for each person in your history such as eye color, hair color, height, gender, weight, short, tall, various health issues or physical traits, mental or emotional characteristics, etc. Make sure to include how all of these traits have come together to make you who you are as a person.

Construction:

Construct your project in such a way as to be presented to the class. Constructions should be organized, large enough to be read and seen by all, colorful, and creative. They should also give a true representation of your family.

Presentation:

You will have the opportunity to present these to the class. You may make your presentation in various forms. It may be a video, powerpoint, poster, skit, or however you may wish to create it. It should be entertaining and draw the interest of the other students in the class.

Due Date:

The projects are due on the chapter test date. All projects are to be turned in on time. *As usual, no projects will be accepted late.*
